

Playground Safety Is No Accident Manual and CD

The manual was revised in 2008 to include a current in-depth review of playground safety related issues, standards, and guidelines. This 526 page Manual contains forms with instructions for inspecting, auditing, and documenting current conditions on the playground. Step by step directions for training your staff to correctly use these forms are also included. The new fourth edition has testimonials, information on taking equipment out of service and more direction on how to implement the maintenance needs assessment process. The appendices include a sample case site history, and sample compliance audit forms from others. Because you have continuously asked, we have included a CD with all the various inspection forms detailed in the manual. The CD is in an easy fill-in format so those who wish can store all their records electronically. Tens

of thousands of people have been using this manual since its first printing. This revision provides an up to date look at what owners and operators of public playgrounds should be considering when trying to comply with their responsibilities as spelled out in both the current ASTM F1487 standard and CPSC Handbook.
